REFERENCES                     PAGES 1 ENCLOSURES (NO. & TYPE)                     REMARKS                      This is UNEVALUATED Information

1. On one evening at the end of May 1953, between 2100 and 2200, a flying object was observed for 1 to 2 seconds from Ayuta PW camp, about 15 to 20 km west of Shakhty ( 40°13' E/47°43' N), Donetsk Oblast. There was a low ceiling, no wind and no rain. The object moved from south to north, east of the camp, between the newly established coal mines and the camp. The flying altitude of the object and the angle over the horizon could not be determined because the horizon could not be seen during nightfall. It seemed, however, the trajectory was very flat. The flying object which was only seen while departing was similar to a yellow-red fire ball which did not change its color.                      the flying object was shaped like a cigar. The size of the object could not be determined. Before the fiery gleam appeared in the sky, a whizzling and roaring sound was heard.                      the roaring sound was no longer heard while the object was departing.

2.                      the flying object might be a rocket.

                     the phenomenon might be a shooting star because shooting stars were repeatedly observed in the Shakhty area during the summer months. Later, however, this assumption was rejected because of the noise accompanying the phenomenon.
